LEARN MORE

Since 2018, The Medici Network has worked to steer and grow the blockchain industry by reaching the key decision-makers at leading financial institutions outside of blockchain.

Medici is the membrane between "order", represented by the Yang, where traditional organizations live, and "chaos," represented by the Yin, where innovators in the blockchain industry see opportunity.

Medici believes that by mastering the interaction of these two opposing forces, we can realize our collective vision for a more inclusive digital economy that promises inherent ownership and governance rights to its participants.

We adopt the 'Taijitu' symbol but encircle the icon with the Medici 'M.' This symbolizes the members of Medici, our transactive memory, who make our events and research possible.
